About Thruvision

Thruvision is the leading provider of safe distance, people security screening technology. Using patented passive terahertz technology, Thruvision is uniquely capable of detecting metallic and non-metallic threats including weapons, explosives and contraband items that are hidden under clothing, at distances between 3m and 10m. Addressing the growing need for safe, fast and effective security, Thruvision completely removes the need for physical “pat-downs” and has been vetted and approved by the US Transportation Security Administration for surface transportation. Operationally deployed in 20 countries around the world, Thruvision is used for aviation and transportation security, retail supply chain loss prevention, facilities and public area protection and customs and border control. The company has offices near Oxford, and in Washington DC.
